Career Objective

Motivated Computer Science undergraduate seeking internship and entry-level opportunities in Full Stack / Web Development. Strong foundation in programming fundamentals, web technologies, and problem-solving, with hands-on industry experience automating real business workflows using React, Vite, Firebase and ERP systems.

Technical Skills

Languages: Java, Python
Web Technologies: HTML, CSS, JavaScript
Frameworks: React.js, Vite, Node.js
Backend & Cloud: Firebase (Authentication, Firestore, Hosting)
Tools: Git, GitHub, Google Forms, WhatsApp Automation, ERP Systems
Concepts: Data Structures & Algorithms, Database Basics, Machine Learning Fundamentals

Work Experience

Coordinator, Team Krian Feb 2026 – May 2026

Short: Worked across billing, production, budgeting, purchase orders, ERP and merchandising at a garment manufacturing company, and built the systems that replaced its manual workflows.

- Handled purchase orders (PO), bills, budgets and labour planning to improve production efficiency and keep orders on schedule.
- Maintained the company ERP and kept inventory and production records accurate across departments.
- Communicated with international fashion buyers on order status, timelines and requirements, and supported merchandising.
- Independently identified manual workflows and designed, built and deployed three solutions: inventory centralization, challan automation and a canteen ticketing app (see Projects).

Projects

Canteen Ticket Digitization Web App (React, Vite, Firebase) — Team Krian

Short: A web app that replaced a WhatsApp + Google Forms + spreadsheet process for ordering canteen meal tickets.

- Built a full-stack app from scratch with phone OTP login and one-time Employee ID device binding to stop account sharing.
- Enforced meal time windows and duplicate-order prevention, removing manual checking and disputes.
- Developed a real-time admin panel using Firestore with a whitelist-based admin access check.
- Debugged Firestore security rules and auth-state handling; shipped to production on Firebase Hosting.

Inventory Centralization & Challan Automation (ERP, Google Forms, WhatsApp) — Team Krian

Short: Centralized inventory on an ERP and automated the challan (delivery document) workflow end to end.

- Centralized inventory records on the World Fashion Exchange ERP, creating a single source of truth in place of scattered data.
- Automated challan creation using Google Forms with automatic WhatsApp replies, cutting manual entry and follow-ups.
- Worked directly with business users to map the existing process, find bottlenecks and roll out the automated flow.

Professional Readiness

Familiar with software development life cycle and agile basics. Actively practicing Data Structures and Algorithms on LeetCode. Comfortable working in team-based environments and quick to learn new technologies.

Education

B.Tech in Computer Science and Engineering Expected Dec 2026
Dr. A.P.J. Abdul Kalam University

Senior Secondary (CBSE) Mar 2020
Ryan International School, Gurugram

High School (CBSE) Mar 2018
Ryan International School, Ludhiana

Soft Skills

Communication, Collaboration, Time Management, Presentation Skills, Project Coordination
